## A taxonomic revision of the genus *Lasianthus* Jack. (Rubiaceae) from Thailand

ZHU Hua

(Kunming Division of Xishuangbanna Tropical Botanical Garden, the Chinese Academy of Sciences, Kunming 650223)

**Abstract** A taxonomic revision of the genus *Lasianthus* Jack. from Thailand is made based on specimens in BKF, BK, L, AAU, K, BM, E, P, KEP, SING and PSU etc. Three species and three varieties are described as new; a new combination, *L. trichophlebus* subsp. *barbellatus* (Ridley) H. Zhu, is made; eight species and five varieties are found to represent new records to Thailand; seven species, i. e. *L. brevidens* Craib, *L. densifolius* Miq., *L. incomptus* Craib, *L. scalaris* Craib, *L. penicillatus* Craib, *L. virgatus* Craib and *L. zambalensis* Elmer, are reduced to synonyms; two species, *L. brevipes* Craib and *L. lowianus* King et Gamble are moved to the genus *Saprosma*; the delimitation of some species is clarified. As a result, fifty-two species, one subspecies and twelve varieties are recognized in the genus *Lasianthus* from Thailand.

**Key words** *Lasianthus* Jack.; Rubiaceae; Taxonomic revision; Thailand

## 1 Introduction

*Lasianthus* Jack. is a large genus of about 142 species in the Rubiaceae, occurring from tropical Asia (c. 120 species) and Australia (only one species) to tropical Africa (c. 20 species) as well as tropical America (2 species) (Robbrecht, 1988). This genus is extremely difficult taxonomically not only because specific diagnostic characters are relatively scarce and based mainly on vegetative organs (such as indumentum, venation, stipules etc.) and quantitative characters, but also because most species of the genus occur only in primary forests. Many earlier species have only one or two collections in herbaria. Some species are never collected again except the type collection owing to the rapid disappearance of primary rain forests in tropical countries. *Lasianthus* species from Thailand were recorded and established mainly by Craib on Kerr's collections. Forty-seven species and five varieties were recognized from Thailand in Craib's Fl. Siam. Enum. (1934). No other treatment on *Lasianthus* species from Thailand has been seen. The author has worked on the genus *Lasianthus* for regional revisions (East Asia) (Zhu, 1998, 1994) and now is working on this genus for Flora of Thailand Project. After a full check of specimens mainly in BKF, BK, AAU, L, KEP, SING as well as PSU (Herbarium of Prince of Songkla University, Hat Yai, Songkhla 90112, Thailand), the result is presented as a preliminary revision on the genus *Lasianthus* from Thailand.

## 2 Taxonomic position

Hooker f. (1880, 1873) placed *Lasianthus* in the tribe Psychotriae based mainly on aestivation of corolla lobes, position, attachment and types of ovules. This treatment was followed by Schumann in 1891. Petit (1964) proposed new definitions for the Psychotriae and Morindeae based especially on seed characters (Psychotriae has seeds with horny endosperm and small embryos, while Morindeae has seeds with soft oily endosperm and large embryos) and transferred *Lasianthus* to the Morindeae. This treatment was followed by Verdcourt (1976) and Robbrecht (1988). Petit's work was based mainly on the research of African species, and *Lasianthus* is clearly different from *Morinda* in many characters, so the systematic position of *Lasianthus* still needs a further research.

## 3 History

*Lasianthus* Jack. was established in 1823. The earliest systematic research on the genus was Hooker's work (1880) which was mainly based on the collections from British India. Fifty-two species of British India were recognized and were classified into four sections, i. e. sect. I *Stipulariae* (cymes sessile, embraced by the large coriaceous stipules); sect. II *Bracteatae* (cymes sessile, not embraced by the large stipules, accompanied by evident, long or short bracts); sect. III *Nudiflorae* (cymes sessile, bracts very inconspicuous, minute, subulate or absent) and sect. IV *Pedunculatae* (Cymes peduncled). The genus *Litosanthes* Bl. was reduced to the sect. *Pedunculatae*. Hooker's work established the taxonomic frame of this genus. Schumann (1891) followed Hooker's system. Ridley (1923) recorded 59 species from Malay Peninsula and put them into three sections: sect. I *Eu\_Lasianthus* (flower heads sessile, not longer than petioles; plants usually hairy; nervules conspicuously parallel); sect. II *Mephitidia* (foetid shrubs nearly all glabrous; leaves subcoriaceous or membranous, nervules not distinctly parallel but broken up; usually drying black; corolla usually longer); sect. III *Litosanthes* (cymes distinctly often long-peduncled, nervation as in *Eu\_Lasianthus*; plants usually hairy). Pitard (1924) recorded 37 species from Indo-China. Craib (1934) recorded 47 species and 5 varieties from Thailand and Yamazaki (1964) recorded 5 species and 1 variety from Ryukyu. Bakhuizen (1965) recorded 28 species from Java and again accepted *Litosanthes* Bl. as a separate genus based on three characteristics, i. e. imbricate corolla, forked stipules and peduncled flowers. Verdcourt (1976) gave an account of the genus from tropical E. Africa. Denys (1981) revised the genus from Central Africa and 6 species were recognized. Robbrecht (1982) identified and discussed the only two species from tropical America. Deb and Gangopadhyay (1991, 1989) revised the genus of India and transferred the whole sect. *Pedunculatae* Hook. f. into *Litosanthes* Bl., but soon later Gangopadhyay & Chakrabart (1992) reduced *Litosanthes* Bl. to *Lasianthus* Jack again. Wong (1989) revised the genus from Malay Peninsula and recognized 54 species based on Ridley's work. Zhu (1998, 1994) revised the genus from China and Japan, and 30 species including 4 subspecies and 13 varieties were recognized.

In the absence of a complete revision of the whole genus, the establishment of the infrageneric system is still difficult to achieve.

## 4 Diagnostic characters

### 4.1 Life form

The *Lasianthus* species are usually shrubs, some undershrubs or grow into small trees, rarely

repent shrubs (some African species).

#### 4.2 Indumentum

An indumentum is present on the branchlets, petioles, the lower surface of the leaves, especially on midrib and veins, as well as stipules in many of the species, and is of diagnostic importance. Some species are almost glabrous, such as *L. inodorus* and *L. lucidus*. A few species have the variation of indumentum from hairy on young branchlets and the lower surface of leaves to subglabrous or glabrous, which has led to the separation of varieties.

Types of indumentum are also of diagnostic importance: stiff\_haired in *L. hirsutus*; villous in *L. chevalieri*, *L. sikkimensis* and *L. curtisii* etc.; pubescent in *L. kurzii*, *L. hookeri* etc.; hispid or strigillose in *L. trichophlebus*.

#### 4.3 Leaf size and shape

The foliage is variable either in shape or in size in *Lasianthus*. Some species have relatively small leaves, less than 10 cm long, such as *L. lucidus*, *L. curtisii* etc.; some have large leaves more than 15 cm long, such as *L. chinensis* and *L. hirsutus* etc. However, most species have oblong leaves. The apex of leaf is caudate in *L. saxorum*. Much more species are cuspidate\_acuminate in the apex of leaf. Most species have leaves with cuneate or acute bases, but *L. wallichii* and *L. inaequalis* etc. have oblique, cordate or rounded bases.

#### 4.4 Venation

The number of veins is of some diagnostic value. The veinlets are of more important diagnostic value. Venation is one of the important diagnostic characters between two easily confusing species, *L. chinensis* and *L. verticillatus*. *L. chinensis* has leaves with more than 10 pairs of veins and reticulate veinlets, while *L. verticillatus* has leaves with less than 10 pairs of veins and parallel veinlets. The venation is usually prominent beneath in this genus. A few species have faint prominence beneath.

#### 4.5 Stipules

Stipules are of diagnostic importance for the infrageneric classification of the genus *Lasianthus*, so the sect. *Stipularis* was established by Hooker f. (1880). Among taxa studied, *L. trichophlebus*, *L. tomentosus* and *L. kurzii* have relatively large, more than 5 mm long, triangular or lanceolate stipules; *L. stipularis*, *L. maculatus*, *L. helfer* etc. have conspicuously large stipules. Some species have minute, inconspicuous stipules. Stipules are interpetiolar in the genus. However, in some references, stipules were confused with bracts in some species descriptions.

#### 4.6 Inflorescence

Inflorescence is axillary, sessile, fascicled, or cymes with peduncles. Bracts or bracteoles are persistent or absent. The diagnostic importance of inflorescence was emphasized by Hooker f. (1880) in his work (sect. *Nudiflorae* and sect. *Pedunculatae* were established). The presence or absence, and the length of peduncles are important diagnostic characters among taxa of the genus, however the systematic value of peduncles is still unclear. The species *L. henryi* shows the variation from having very short c. 2 mm long peduncles to a prominence at axils of leaves or no peduncles at all. The author does not agree to Deb & Gangopadhyay by moving sect. *Pedunculatae* to *Lithosanthes* (1989). Bracts are particularly orbicular and coriaceous in the species *L. inodorus* and are linear or lanceolate in *L. wallichii*, *L. rhinocerotis*, *L. sikkimensis* etc., or inconspicuous or absent in *L. lucidus*, *L. curtisii* and *L. chinensis* etc.

#### 4.7 Flowers

Flowers are small, sessile or subsessile. Some species have 4-merous flowers, such as *L. kerrii* and *L. trichophlebus*. Most species have 5-merous flowers. Calyx shows much more significant

diagnostic value. *L. curtissii* has calyx cleft nearly to the base; *L. chevalieri* has calyx lobes conspicuously longer than tubes; *L. formosensis* has calyx lobes as long as the tubes or a little longer than tubes; *L. hispidulus* usually has calyx with 5 minute and broad triangular teeth; *L. chinensis* has calyx with small, ovate and reflected lobes; *L. verticillatus* has calyx being truncate or with minute teeth. Corolla is easily falling in preparing specimens, and is not often used as a diagnostic character. The shape of stamens and the ovary are rarely used as diagnostic characters.

#### 4.8 Fruit

Fruits are drupes crowned with persistent calyx lobes. The shape and size of fruit appear somehow different among species, while the indumentum and surface states (smooth or warty etc.) of fruit are more diagnostically important. The fruits have 3~8 pyrenes. The shape, surface states of seed coat and sections of seeds are of important diagnostic value.

### 5 Taxonomic revision

**Lasianthus** Jack. in Trans. Linn. Soc. 14: 125. 1823, nom. cons.; Bl. Bijdr.: 995. 1826; Spreng. Gen. Pl. 1: 94. 1830; Wight in Calc. Journ. Nat. Hist. 6: 498. 1846; Miq. Fl. Ind. Typus: *Lasianthus cyanocarpus* Jack. (typ. cons.)

Distribution: There are about 142 species distributed in tropical area of the world and the tropical Asia is the distribution center. Approximately 120 species are in tropical Asia, 20 species in Africa, 1 species in Australia and 2 in tropical America.

#### Key to the species

1. Flowers solitary or fascicular, sessile or subsessile.
2. Bracts conspicuous.
  3. Bracts large, leaf-like, ovate or cordate.
    4. Leaves cordate and oblique at base, subsessile ..... 19. *L. inaequalis*
    4. Leaves cuneate, acute, not oblique at base, petioles conspicuous ..... 16. *L. hirsutus*
  3. Bracts relatively small, non leaf-like.
    5. Leaves cordate or slightly cordate and more or less oblique at base, subsessile or short petioled.
      6. Nerves more than 10 pairs, calyx teeth filiform ..... 35. *L. pilosus*
      6. Nerves less than 10 pairs, calyx teeth triangular ..... 53. *L. wallichii*
    5. Leaves cuneate or subrotund, not oblique at base.
      7. Branches glabrous; bracts orbicular, coriaceous ..... 20. *L. inodorus*
      7. Branches and leaves beneath villous or depressed pubescent; bracts chartaceous.
        8. Bracts small, subulate or linear-lanceolate.
          9. Leaves relatively large, 9~12 cm long; bracts subulate.
            10. Petioles up to 1 cm long, nervules dilute and inconspicuous; bracts very small; fruit conspicuously tetragonal ..... 49. *L. tetragonoides*
            10. Petioles 3~5 mm long, nervules conspicuous beneath; bracts conspicuous; fruit not tetragonal ..... 50. *L. tetragonoides*

11. Branches, leaves beneath densely tomentose, nervules reticulate; bracts and calyx spreading villous ..... 36. *L. politus*
11. Branches, leaves beneath appressed pubescent; nervules parallel, bracts and calyx appressed pubescent ..... 38. *L. rabilii*
9. Leaves small, 5~9 cm long; bracts linear-lanceolate.
12. Leaves oblong to oblong-lanceolate, fruit with 4 pyrenes ..... 21. *L. kerrii*
12. Leaves lanceolate, fruit small, with 8 pyrenes ..... 1. *L. appressus*
8. Bracts relatively large, linear, lanceolate or ovate.
13. Stipules conspicuous, more than 5 mm long.
14. Stipules quite large, completely covering the cymes ..... 46. *L. stipularis*
14. Stipules not covering the cymes.
15. Bracts linear, up to 1.7 cm long ..... 24. *L. lineolatus*
15. Bracts non-linear, not more than 5 mm long.
16. Branches appressed pubescent; leaves cuneate at base, appressed pubescent on nerves beneath.
17. Stipules up to 8 mm long; fruit hirsute, with 5~6 pyrenes ..... 22. *L. kurzii*
17. Stipules up to 5 mm long; fruit subglabrous, with 4 pyrenes ..... 14. *L. foxworthyanus*
16. Branches spreading villose; leaves obtuse to rounded at base, spreading villose or ciliate beneath
- ..... 2. *L. aristatus*
13. Stipules not conspicuous.
18. Leaves lanceolate to elliptic-lanceolate; bracts linear to lanceolate, up to 2 cm long; fruit smooth ..... 45. *L. sikkimensis*
18. Leaves oblong to elliptical; bracts filiform; fruit rugulose ..... 41. *L. ridleyi*
2. Bracts not conspicuous or absent.
19. Calyx lobes linear, more than 10 mm long ..... 5. *L. chevalieri*
19. Calyx lobes not linear, no more than 10 mm long.
20. Calyx lobes longer than tube or as long as tube.
21. Calyx cleft nearly to the base, calyx lobes lanceolate and obviously longer than tube ..... 10. *L. curtissii*
21. Calyx not cleft to the base, calyx lobes linear-lanceolate or triangular, slightly longer than or almost as long as tube.
22. Leaves usually small, ovate or ovate-lanceolate, the apex caudate, nerves 3~5 pairs.
23. Leaves with cuneate base; petioles 5~8 mm long; flowers 5-merous, calyx lobes linear-lanceolate ..... 26. *L. lucidus*
23. Leaves with subrounded or rounded base; petioles 2~3 mm long; flowers 4-merous, calyx lobes triangular
- ..... 42. *L. sarmenosus*
22. Leaves usually 10~16 cm long, oblong or elliptic-oblong, or obovate-rhombic, nerves 6~8 pairs.
24. Leaves oblong or elliptic-oblong, nerves 6~7 pairs; branches and leaves beneath spreading hairy; calyx 4~5 mm long ..... 13. *L. formosensis*
24. Leaves obovate-rhombic, nerves 8 pairs; branches and leaves beneath densely appressed hirsute; calyx very small, only 2 mm long ..... 33. *L. parviflorus*
20. Calyx lobes obviously shorter than tube.
25. Leaves with conspicuously reticulate veinlets.
26. Leaves chartaceous.
27. Branches densely pubescent, so as leaf nerves beneath; leaves narrowly oblong, nerves 12~14 pairs ..... 4. *L. chartaceus*

27. Branches glabrous, so as leaf nerves beneath; Leaves oblong\_lanceolate or oblong\_oblanceolate.
28. Stipules small, lanceolate; nerves 8~9 pairs ..... 8. *L. conspicuus*
28. Stipules oblong\_triangular, 5 mm long; nerves 13~16 pairs ..... 39. *L. repouensis*
26. Leaves coriaceous.
29. Calyx cupular, with limb truncate or minutely dentate ..... 47. *L. subaureus*
29. Calyx not cupular, without truncate limb.
30. Stipules triangular, 2~3 mm long; calyx lobes or teeth ovate and reflected; fruit with 5~6 conspicuous longitudinal angles ..... 6. *L. chinensis*
30. Stipules triangular with broad base and abruptly narrowed apex; calyx with minute teeth; fruit subglobose without angles ..... 29. *L. malaccensis*
25. Leaves with parallel or subparallel nervules.
31. Stipules more than 5 mm long, hirsute or glabrous outside.
32. Leaves broadly elliptic, 5~7 cm broad, stipules broadly triangular ..... 11. *L. ellipticus*
32. Leaves not broadly elliptic, less than 5 cm broad, stipules not broadly triangular.
33. Stipules glabrous outside, very coriaceous; calyx limb tubular, truncate ..... 15. *L. helfer*
33. Stipules hirsute outside, calyx limb not cupular and truncate.
34. Stipules large, up to 8 mm long, triangular Oblong, subcoriaceous and persistent
35. Leaves with cuneate base, fruit with 4 pyrenes ..... 27. *L. maculatus*
35. Leaves with oblique rounded base, fruit with 5 pyrenes ..... 30. *L. marginatus*
34. Stipules lanceolate or linear\_lanceolate, 5~7 mm long, chartaceous, often deciduous.
36. Hirsute on young branches and leaf nerves beneath, leaves coriaceous
- ..... 51. *L. trichophlebus*
36. Hirsute on branches and pubescent on lower surface of leaves; leaves subcoriaceous
- ..... 50. *L. tomentosus*
31. Stipules much smaller, less than 5 mm long, puberulous.
37. Calyx cupular, limb usually truncate; leaves large.
38. Calyx mouth quite wide; nervules subparallel; fruit 10\_ribbed ..... 34. *L. perakensis*
38. Calyx mouths not wide; nervules parallel; fruit smooth ..... 52. *L. verticillatus*
37. Calyx not cupulate, with conspicuously lobes; leaves large or small.
39. Leaves large, more than 13 cm long, nerves more than 5 pairs.
40. Leaves lanceolate; nerves 9\_paired, nervules subreticulate with forks very slender; branches and nerves beneath sparsely depressed pubescent ..... 23. *L. lancifolius*
40. Leaves not lanceolate, nerves 5~9\_paired, nervules subparallel or parallel and conspicuously elevated beneath; branches and nerves beneath densely appressed puberulous or glabrous.
41. Leaves oblong or oblong\_lanceolate, 3~6 cm broad, ciliate\_hairy along nerves beneath and at margins; calyx not constricted below the teeth, fruit smooth with 5 pyrenes
- ..... 18. *L. hookeri*
41. Leaves elliptic\_oblanceolate, 6~9 cm broad; calyx constricted somewhat below teeth; fruit with 3~4 pyrenes.
42. Branches and leaves glabrous, fruit fusiform ..... 48. *L. subcalvus*
42. Branches and nerves beneath minutely appressed pubescent; fruit ellipsoid
- ..... 28. *L. maingayi*
39. Leaves relatively small, less than 13 cm long.
43. Fruits with 3 pyrenes ..... 32. *L. oligoneurus*
43. Fruits with 4~5 pyrenes.
44. Fruits with 4 pyrenes.
45. Branches tomentose; leaves pubescent beneath, nerves 8 pairs; calyx not constricted at the throat, calyx lobes lanceolate; fruit ferrugineo\_villous ..... 44. *L. schmidii*
45. Branches appressed pubescent; leaves sparsely strigose on nerves beneath, nerves 5~6 pairs; calyx somewhat constricted at the throat, shortly 4\_toothed limb or almost truncate; fruit glabrous ..... 9. *L. constrictus*

44. Fruit with 5 pyrenes.
46. Branches glabrous or sparsely puberulous; calyx sparsely pubescent, fruit glabrous or subglabrous  
..... 12. *L. fordii*
46. Branches and leaves beneath densely pubescent or villous; calyx densely pubescent or hirsute; fruit puberulous or hirsute.  
47. Branches and leaves beneath densely villous; leaves elliptic or ovate-oblong, the apex cuspidate-acuminate, the base obtuse; calyx densely hirsute, fruit hirsute ..... 17. *L. hispidulus*
47. Branches and leaves beneath appressed pubescent; leaves oblong-lanceolate, the apex caudate, the base cuneate; calyx appressed pubescent, fruit fuscous-pubescent ..... 43. *L. saxorum*
1. Flowers peduncled.
48. Peduncles more than 6 mm long.
49. Plant glabrous; peduncles more than 2 cm long ..... 25. *L. longipedunculatus*
49. Plant not glabrous; peduncles 6~ 10 mm long.
50. Peduncles slender, branches and leaves beneath sparsely pilose; nerves impressed above, nervules inconspicuous above; flowers 4-merous ..... 3. *L. bicolor*
50. Peduncles relatively robust; branches and leaves beneath appressed pubescent; nerves and nervules conspicuous both sides; flowers 5-merous ..... 37. *L. puberulus*
48. Peduncles usually less than 6 mm long.
51. Peduncles conspicuous, slender, 3~ 5 mm long; leaves relatively small, 5~ 10 cm long and 2.5~ 3.5 cm broad ..... 31. *L. micranthus*
51. Peduncles conspicuous or not conspicuous, or congested to a short prominence; leaves relatively large, more than 12 cm long and more than 3.5 cm broad.
52. Plant almost glabrous; leaves chartaceous, nerves 6~ 7 pairs; peduncles congested to a short prominence; bracts inconspicuous; flowers small, calyx less than 2.5 mm long and with triangular or subulate lobes ..... 7. *L. congesticymus*
52. Plant hairy; leaves coriaceous, nerves 10~ 12 pairs; peduncles conspicuous or not conspicuous; bracts numerous, linear or filiform, 0.6~ 2 cm long, villous; flowers relatively big, calyx up to 8 mm long with linear-lanceolate lobes ..... 40. *L. rhinocerotis*

**5.1 *Lasianthus appressus*** Hook. f., Fl. Brit. Ind. 3: 181. 1880; King et Gamble, Mat. Fl. Malay Penins. no. 15: 121. 1904; Ridley, Fl. Malay Penins. 2: 156. 1923; Craib, Fl. Siam. **5.6 *Lasianthus chinensis*** (Champ.) Benth., Fl. Hongkong. 160. 1861; Hook. f. Fl. Brit. Ind. 3: 187. 1880; Forb. et Hemsl. in Journ. Linn. Soc. (Bot.) 23: 388. 1888; Yamazaki in J. Jap. Bot. 39: 352. 1964; T. S. Liu et J. M. Chao in Taiwania 10: 124, fig. 4. 1964; J. M. Chao in Fl. Taiwan 4: 286. 1978, excl. pl. 1005; H. Zhu in Acta Phytotax. Sin. 32 (1): 67. 1994. — *Mephitidia chinensis* Champ. in Kew Journ. Bot. 4: 196. 1852. TYPE: China. Hongkong, Champion? no. 112 (lectotype, K, designated here; isolectotype, NY).

*Lasianthus dinhensis* Pierre ex Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 388. 1924. SYN-TYPES: Cambodia. Kampot, Poilane 283 (P); Cochinchina, Baria, Pierre 3257 (P; isosyntypes, K, BM).

*Mephitidia odajimae* Masam. in Trans. Nat. Hist. Soc. Formos. 24: 211. 1934. — *Lasianthus chinensis* (Champ) Benth. var. *odajimae* (Masam.) Kanehira, Formos. Trees rev. ed.: 669. 1936.

Distribution: China, Vietnam, Laos, Cambodia, Thailand (new record), Malay Peninsula, Philippines.

*L. chinensis* Benth. is easily confused with *L. verticillatus* (Lour) Merr. (= *L. obliquinervis* Merr.). The confusion occurred in many references. According to Bentham's original description, *L. chinensis* has leaves with parallel nerves conspicuous on both sides, diverging from the midrib, but the type specimen shows almost reticulate veinlets. This may be a factor leading to the confusion. *L. chinensis* usually has dense pubescence on branches and leaf nerves beneath, and leaves chartaceous or subcoriaceous with 10~13 (15) pairs of nerves and reticulate veinlets as well as reflexed margins, calyx with triangular, ovate or orbicular inflected lobes, and fruit with 5~6 conspicuous, longitudinal angles. *L. obliquinervis* Merr. has thin or sparse appressed pubescence on branches and leaf nerves beneath, and coriaceous leaves with 5~9 pairs of nerves and parallel veinlets, and cupulate, usually truncate or sometimes minutely toothed calyx, and fruit without angles.

### 5.7 *Lasianthus congesticymus* H. Zhu, sp. nov. Fig. 1.

Similis *L. lancifolio* Hook. f., sed foliis latioribus, nervis lateralibus utrinque 6~7, cymis subsessilibus vel breviter pedunculatis, floribus 4\_meris, fructibus ellipsoideis rugosis differt.

Frutex; ramuli subglabri, primo compressi, in sicco fusci, mox teretes. Folia elliptica apice acuminata vel subcaudata, basi cuneata vel rotundata saepe inaequilateralia, 12~19 cm longa, 3.5~6.5 cm lata, chartacea, sicca plus minusve fuscescentia, subtus viridia, utrinque glabra, costa supra conspicua, subtus prominente, nervis lateralibus utrinque 6~7 supra conspicuis subtus prominulis, nervulis subparallelis utrinque conspicuis; petioli 8~10 mm longi subglabri; stipulae triangulae, acutae, 1.5 mm longae. Inflorescentia pedunculis abbreviatis instructa, floribus subsessilibus. Calyx 2 mm longus, lobis 4, triangularibus, 1 mm longis extus sparse puberulus; corolla 1 cm longa extus superne puberula, lobis 5 supra pilosa. Fructus ellipsoidei, 5 mm longi rugosi.

**Thailand.** Nakhon Sri Thammarat, Khao Luang, evergreen montane forest, alt. 700~1200 m., 1995\_08\_24, K. Larsen *et al.* 45955 (holotype, AAU, here designated); Phattalung, Puff et Sridth 930711\_1/1 (AAU); Trang, Bunnab 467 (BKF).

*L. congesticymus* differs from *L. lancifolius* by having broader leaves with nerves 6~7 paired, subsessile or short peduncled cyme, 4\_merous flowers and ellipsoid rugose drupes.

### 5.8 *Lasianthus conspicuus* Ridley in Journ. Fed. Mal. States Mus. 4: 36. 1909; Ridley, Fl. Malay Penins. 2: 167. 1923; Craib, Fl. Siam. Enum. 2 (1): 209. 1934; Wong, Tree Fl. Malay Penins. 4: 369. 1989. TYPE: Malay Peninsula. Pahang, Ridley 13628 (SING).

Distribution: Malaysia (Malay Peninsula), Thailand.

**Thailand.** Pattani, Kerr 14946 (BK); Satun, Maxwell 85\_837 (BK).

**Malaysia.** Malay Peninsula, F. G. Sow 47163 (KEP).

### 5.9 *Lasianthus constrictus* Wight in Calc. Journ. Nat. Hist. 6: 515. 1846; Kurz, For. Fl. Brit. Burma 2: 31. 1877; Hook. f., Fl. Brit. Ind. 3: 188. 1880. TYPE: Myanmar. Griffith s. n. (K).

#### 5.9a var. *constrictus*

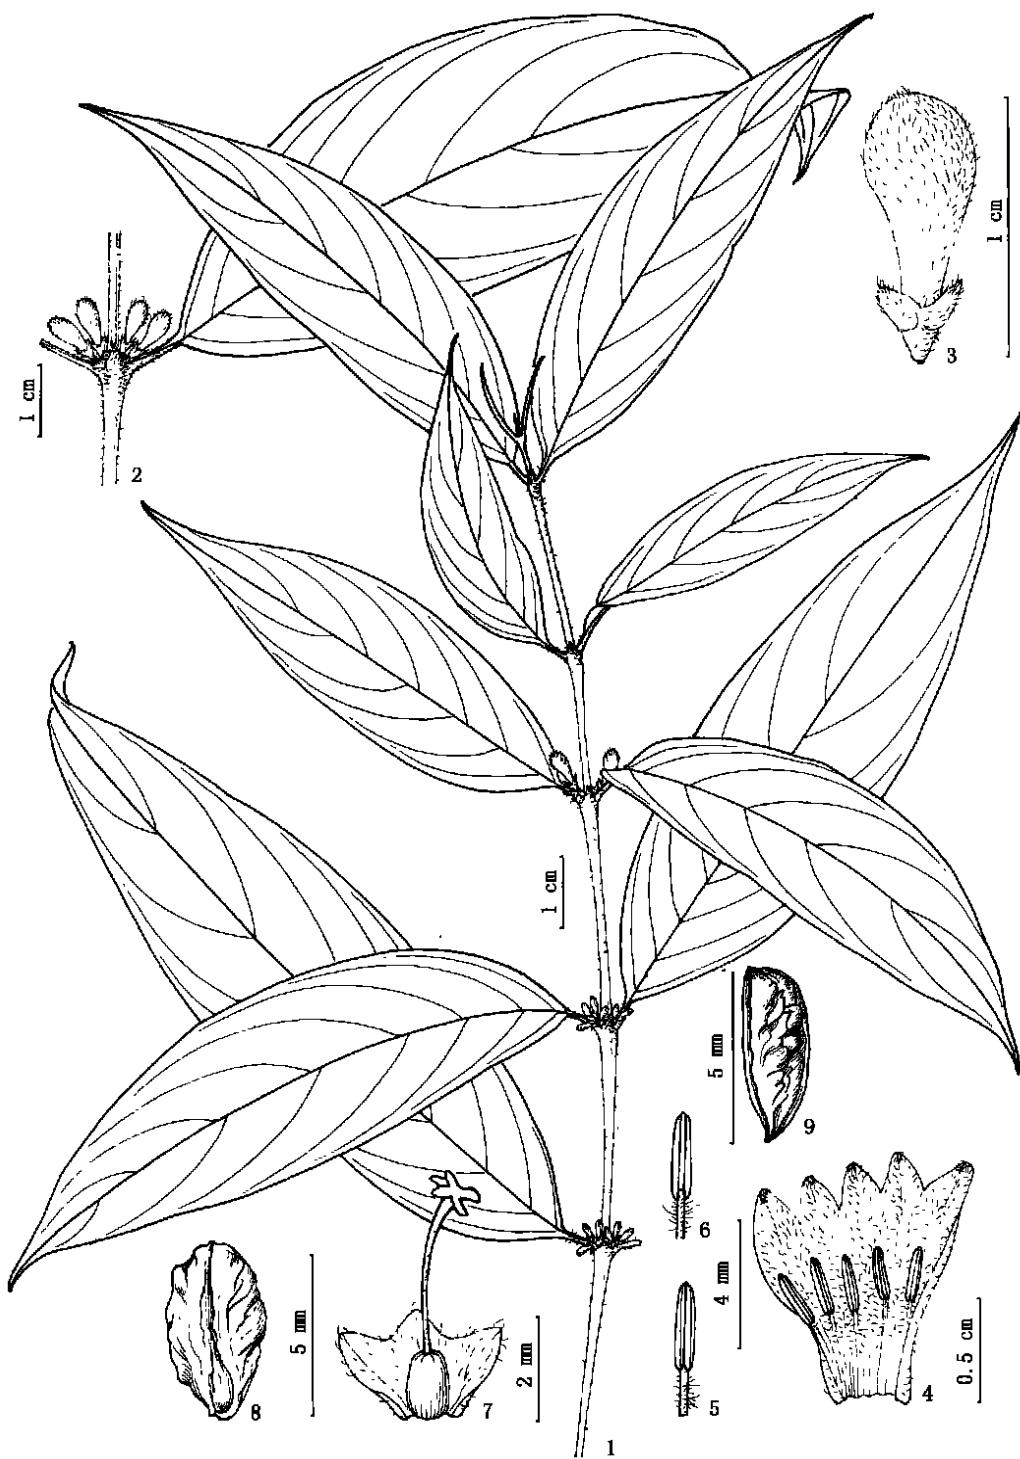

Distribution: Myanmar.

The specimens Kerr 9297 and Kerr 19425 were cited by Craib (1934) as *L. constrictus* Wight. I checked Kerr 9297 in BK which does not agree with Wight's type specimen but is similar to *L. maculatus* Craib, while Kerr 19425 in K agrees much more with var. *latifolius* Craib.

#### 5.9b var. *latifolius* Craib, Fl. Siam. Enum. 2 (1): 209. 1934. TYPE: Thailand. Pattani, Kerr 14940 (holotype, K; isotype, BK)..

*Lasianthus constrictus* auct. non Wight: King et Gamble, Mat. Fl. Malay Penins. no. 15: 117. 1904; Ridley, Fl. Malay Penins. 2: 163. 1923; Craib, Fl. Siam. Enum. 2 (1): 209. 1934; Wong, Tree Fl. Malay Penins. 4: 369. 1989.

Distribution: Thailand, Malaysia, Indonesia.

Fig. 1 *Lasianthus congesticymus* H. Zhu

1. Flowering branch; 2. Enlarged inflorescence; 3. An enlarged flower; 4. Corolla split opened;  
5& 6. Stamen; 7. Calyx split opened; 8. Pyrene (adaxial view); 9. Pyrene (lateral view) (Drawn by X. L. Wu)

This variety is different from the typical variety by having much more broad leaves, longer stipules and bigger fruit.

**Thailand.** Puket, Kerr 16318 (BK); Trat, Murata *et al.* T\_17522 (BKF); Nakawn Sritamarat, Tagawa T\_6731 (BKF); Phangnga, Beusekom *et al.* 696 (BKF); Chanthaburi, Niyomdham *et al.* 1318 (BKF); Peninsular region, Anan 753; Winit 49 (BKF).

*Lasianthus tavadae* Ohwi in Acta Phytotax. Geobot. 10: 137. 1941. TYPE: Okinawa Isl., S. Tawad 6738, not seen.

*Lasianthus incomptus* Craib in Kew Bull. 1933: 21. 1933 et Fl. Siam. Enum. 2(2): 212. 1934, syn. nov. TYPE: Chantaburi, Kerr 9618. (holotype, K; isotype, BK).

Distribution: China, Japan (Yakushima, Kyushu, Ryukyu), Indo China, Thailand.

This species is close to *L. fordii* Hance. It was once reduced to a pubescent variety or a form of *L. fordii* Hance. It is difficult to distinguish this species from *L. fordii* Hance only on the indumentum, which is often variable responsive to habitats. Scrutiny on those two species reveals that *L. formosensis* Matsum. has lanceolate calyx lobes longer than tube and usually dense indumentum, while *L. fordii* Hance has triangular lobes obviously shorter than tube and usually thin and sparse indumentum. Therefore, *L. formosensis* Matsum. and *L. fordii* Hance are still treated as two separate species.

The type of *L. incomptus* Craib agrees well with the specimens of *L. formosensis* Matsum from SW China.

**Thailand** Chieng Mai, Bunchuai 1478 (BKF); Nakhon Nayok, Murata *et al.* T\_52639 (BKF); Loei, Beusekom *et al.* 4561 (BKF); Pangnga, Geesink *et al.* 5141 (AAU).

**5.30 Lasianthus marginatus** Craib in Kew Bull. 1933: 23. 1933 et Fl. Siam. Enum. 2 (1): © 1994-2010 China Academic Journal Electronic Publishing House. All rights reserved. <http://>

215. 1934. TYPE: Thailand. Chantaburi, Kerr 9551 (holotype, K; isotype, BK).

Distribution: Endemic to Thailand.

**Thailand.** Chantaburi, Kerr 17862 (BK).

**5.31 Lasianthus micranthus** Hook. f., Fl. Brit. Ind. 3: 190. 1880; Hutch. in Sarg., Pl. Wils. 3: 402. 1916; H. Li in C. Y. Wu, Fl. Xizang. 4: 451. 1985; H. Zhu in Acta Phytotax. Sin. 32 (1): 74. 1994. — *Litosanthes micranthus* (Hook. f.) Deb et Gang. in Candollea 44: 220. 1989. TYPE: India. Upper Assam, Griffith s. n. (E. Ind. Comp. no. 2930) (K).

*Lasianthus microstachys* Hayata, Icon. Pl. Formos. 9: 63. 1920. TYPE: Taiwan, Hayata 24331 (isotype, SCBI).

*Lasianthus balansae* (Drake) Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 396. 1924. — *Mephitidia balansae* Drake in Morot Journ. Bot. 9: 238. 1895. SYNTYPES: Vietnam. Tonkin, Balansa 659 (Dong Dang), 2652, 2653 (Bavi), 2651 (Phuong Lam) (P; isotypes, K).

*Lasianthus octonervius* Hand. Mazz. in Sinensis 5: 14. 1934. TYPE: China. Guangxi (Kwangsi), R. C. Ching 7382 (SCBI).

*Lasianthus seikomontanus* Yam. in Journ. Soc. Trop. Agr. 7: 148. 1935. TYPE: Yamamoto 2468, not seen.

Distribution: China, N Vietnam, NE India, Thailand (New record).

**Thailand.** Chiang Mai, Doi Inthanon, alt. 1900~2595 m, Tagawa *et al.* 2859 (BKF).

**China.** Yunnan: Henry 13670; Guangdong: Mt. Dinghu, H. Zhu 90\_6\_2, 90\_6\_8 (HIT-BC), G. L. Shi 107 (SCBI); Yuanchun, L. Liu *et al.* 331 (SCBI), L. Liu et G. C. Zhang 0091 (SCBI).

**Vietnam.** Tonkin, Balansa 2652, 659, 2651 (K); Phu tho, Chevalieri 32153 (P).

**5.32 Lasianthus oligoneurus** K. Schum. in Bot. Tidsskr. 24: 340. 1902; Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 397. 1924; Craib, Fl. Siam. 2 (1): 215. 1934. TYPE: Thailand. Chantaburi, Schmidt 390 (holotype, C).

Distribution: Endemic to Thailand.

From original description, this species has trilocular drupe. I saw a photo of the type specimen from C, in which no fruit was seen.

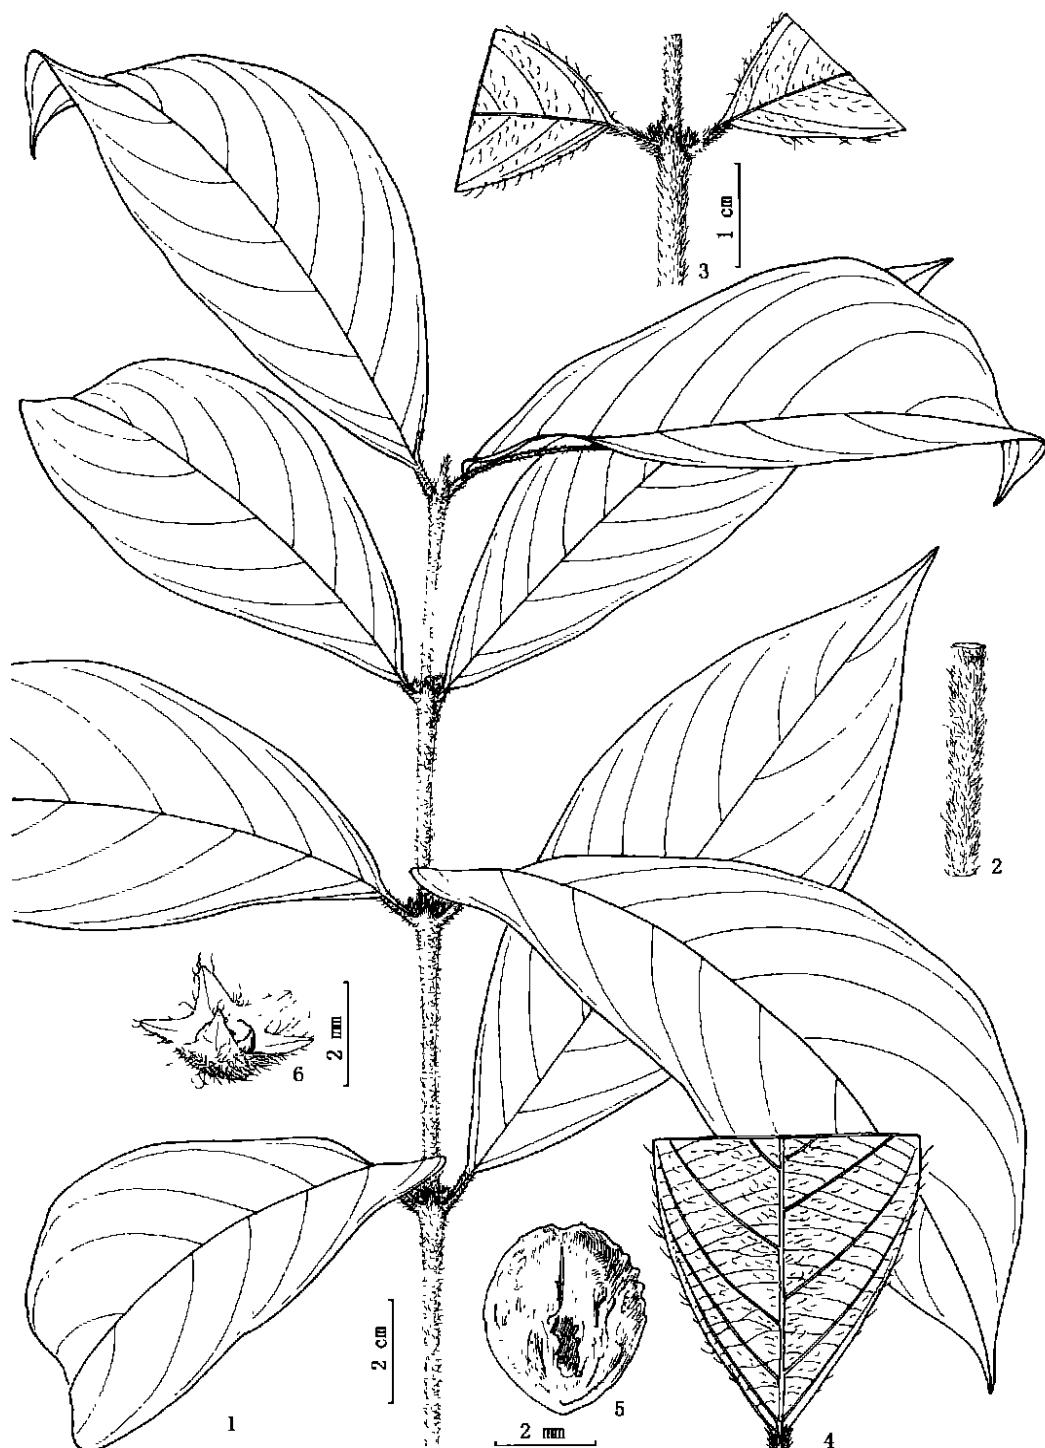

**5.33 Lasianthus parviflorus** H. Zhu, sp. nov. Fig. 2.

Proximus *L. rabilii* Craib, sed ramulis dense hirsutis, foliis obovato-rhombeis, floribus minoribus, calycibus c. 2 mm longis, fructibus 4 mm longis differt. A *L. verticillato* (Lour.) Merr. ramulis dense hirsutis, foliis obovato-rhombeis, floribus minoribus differt.

Frutex; ramuli hirsuti. Folia obovato-rhombea, apice acuminata vel breviter caudata, basi cuneata, 12~16 cm longa, 3.5~5.5 cm lata, subcoriacea, supra glabra subtus ad costam nervos nervulosque appresse hirsuta, costa supra impressa, subtus prominente, nervis lateralibus utrinque 8 utrinque prominentibus, nervulis parallelis utrinque conspicuis; petioli usque ad 5 mm longi, dense hirsuti; stipulae c. 4 mm longae hirsutae. Inflorescentia axillaris, sessilis, parva, bracteis inconnspicuis. Flores parvi, sessiles; calyces hirsuti, tubo brevissimo, lobis 5 lanceolatis tubo longioribus, 1.5 mm longis. Fructus c. 4 mm longi.

Thailand. Krabi, Bang Kram Forest Reserve, alt. 75 m, K. Larsen *et al.* 43377 (holotype, AAU).

*L. parviflorus* is somewhat similar to *L. rabilii* and *L. verticillatus*. It differs from *L. rabilii* by having densely hirsute branches, obovate rhombic leaves, smaller flowers with calyx only 2

Fig. 2 *Lasianthus parviflorus* H. Zhu

1. Flowering branch; 2. Enlarged branch; 3. Enlarged node showing stipule and axillary inflorescence; 4. Enlarged part of the lower surface of leaf; 5. Pyrene (adaxial view); 6. An enlarged flower without corolla (Drawn by X. L. Wu).

mm long and smaller drupes. It differs from *L. verticillatus* by having also densely hirsute branches, obovate-rhombic leaves and smaller flowers.

**5.34 *Lasianthus perakensis*** King et Gamble in Journ. As. Soc. Beng. 73: 126 (Mat. Fl. Malay Penins. no. 15: 126) 1904; Ridley, Fl. Malay Penins. 2: 160. 1923; Wong, Tree Fl. Malay Penins. 4: 372. 1989, excl. syn. *L. flavinervius* Ridl. SYNTYPES: Malay Peninsula, King's coll. 682 (K), 2438, 2838, 10210 (K); Wray 4128 (SING).

**Thailand.** Nakhon Srithamathat, Larsen *et al.* 45889 (AAU).

**Malaysia** Malay Peninsula, Kedah, FRI 14166 (KEP); Selangor, FRI 0343 (SING); Perak, K. F. N. 99775 (SING); Kelantan, FRI 7159 (SING).

**5.35 *Lasianthus pilosus*** Wight, in Calc. Journ. Nat. Hist. 6: 506. 1846; Hook. f., Fl. Brit. Ind. 3: 182. 1880; King et Gamble, Mat. Fl. Malay Penins. No. 15: 115. 1904; Ridley, Fl. Malay Penins. 2: 157. 1923; Wong, Tree Fl. Malay Penins. 4: 370. 1989. TYPE: Malacca, Griffith s. n. (Kew Distrib. 2918, K).

### 5.35a var. *pilosus*

Distribution: S Thailand (new record), Malay Peninsula.

**Thailand.** Surathani, Puff et Sridith 930703\_1/4 (PSU); Chumphon, Larsen *et al.* 43154 (PSU, AAU); Ranong, Sino\_Thai Exped. 1182 (HITBC); Puff et Sridith 930707\_1/6 (PSU, AAU).

**Malaysia** Malay Peninsula, Kemaman, Corner s. n. (Singapore Field no. 30289) (KEP); Selangor, FRI 14793 (SING), KFN 104440 (SING).

**5.35b var. *angustifolius*** Hook. f., Fl. Brit. Ind. 3: 182. 1880; Craib, Fl. Siam. Enum. 2 (1): 215. 1934. TYPE: Myanmar. Tenasserim, Mergui, Griffith s. n. (K).

Distribution: Myanmar, Thailand, Malaysia (Malay Peninsula).

**Thailand.** Ranong, Shimizu T\_26219 (BKF), Fukuoka T\_36015 (BKF), Shimizu *et al.* T\_26200 (BKF), 26224 (BKF); Surat, Thw *et al.* 51 (BKF), Kerr 11947 (BK); Puket, Kerr 17408 (BK), 16700 (BK), 18401 (BK).

Differing from typical variety by having leaves relatively narrow, 10 to 12.5 cm long and 2.5~3 cm broad.

**5.36 *Lasianthus politus*** Ridley in J. Roy. As. Soc. S. Br. 79: 85. 1918 et Fl. Malay Penins. 2: 158. 1923; Wong, Tree Fl. Malay Penins. 4: 372. 1989. TYPE: Malay Peninsula, Selangor, Ridley 15690 (K).

### 5.36a var. *politus*

Distribution: Thailand (new record); Malaysia (Malay Peninsula).

**Thailand.** Loei, Murata *et al.* T\_42857 (BKF), Beusekom *et al.* 4562 (BKF).

**Malaysia** Malay Peninsula, Fraser Hills, Unknown coll. 22570 (KEP).

**5.36b var. *insularis*** Craib, Fl. Siam. Enum. 2(1): 216. 1934. TYPE: Thailand. Surat, Put 1195 (K).

Endemic to Thailand.

Differing from the typical variety by having oblong-elliptic leaves with subrounded bases and conspicuous bracts.

**5.37 *Lasianthus puberulus*** Craib in Kew Bull. 1933: 24. 1933 et Fl. Siam. Enum. 2(1): 216. 1934. TYPE: Thailand. Chantaburi, Kerr 17735 (holotype, K; isotype, BK).

Distribution: Endemic to Thailand.

**Thailand.** Chantaburi, Kerr 17735a (BK), Put 2878 (BK).

- 5.38 Lasianthus rabilii** Craib in Kew Bull. 1933: 24. 1933 et Fl. Siam. Enum. 2(1): 216. 1934. TYPE: Thailand. Puket, Rabil 364 (holotype, K; isotype, BK).

Distribution: Endemic to Thailand.

Similar to *L. kurzii* but different from it by having smaller bracts and stipules as well as leaves.

- 5.39 Lasianthus repoeuensis** Pierre ex Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 387. 1924. TYPE: Cambodia. Thepong, Knang\_krepeuh Mts., Pierre 1257 (P).

*Lasianthus penicillatus* Craib in Kew Bull. 1933: 23. 1933 et Fl. Siam. Enum. 2(1): 215. 1934, syn. nov. TYPE: Thailand. Puket, Kerr 18827 (holotype, K; isotype, BK).

Distribution: Thailand, S Vietnam.

**Thailand.** Surat, Kerr 12462 (BK).

**Vietnam.** Lam Dong, Tirvengadum *et al.* 1556 (AAU).

- 5.40 Lasianthus rhinocerotis** Bl. Bijdr. 996. 1826; Ridley, Fl. Malay Penins. 2: 154. 1923; Bakh. f. in Backer et Bakh. f., Fl. Java 2: 338. 1965; H. Zhu in Acta Bot. Yunnan. 20(2): 154. 1998. TYPE: Java, Blume s. n. (holotype, L).

**5.40a subsp. *rhinocerotis***

Distribution: Thailand (new record), Malaysia (Peninsula and Borneo), Indonesia (Java, Sumatra).

**Thailand.** Nakhon Srithamathat, Larsen *et al.* 45970 (AAU).

**Malaysia** Malay Peninsula, Pahang, T. & P. 992 (K), Klachenberg & Lundin 800 (L), K. 8015 (L); Malacca, Shimizu *et al.* 13352 (K, L), 13683 (L); Univ. Mal. no. 8090 (K), King 3209 (L); Camenon highlands, F M S no. 27033 (KEP); Kasim *et al.* 01708 (L); Perak, FRI 12904 (L); Johore, M. Noor *et al.* MN48 (L); Gunung Murud, Rena *et al.* S. 60344 (L). Borneo, Sabah, Beaman 7666 (L), 9337 (L), 10633 (L), 10788 (L); Clemens 31016 (L).

**Malaysia.** Malay Peninsula, Selangor, Ulu Gombak, Carrick 1456(L).

**Indonesia.** Sumatra, N. Lorzing 14609(L); SE Sumatra, Muara Enim, P. Buwalda 7590(L).

**5.47 Lasianthus subaureus** Craib in Kew Bull. 1933: 27. 1933 et Fl. Siam. Enum. 2(1): 218. 1934. TYPE: Thailand. Puket, Kerr 14117 (holotype, K; isotype, BK).

Distribution: Thailand, Myanmar, Malaysia.

**Thailand.** Surat, Put 772, 1227(BK); Songkla, Kerr 15930(BK).

**Malaysia.** Malay Peninsula, Selangor, FRI 18007(SING); Malacca, Ridley s. n. (SING), Ridley 3218(SING); Lang Kawi Islands, H. C. Robinson 6292(SING).

**5.48 Lasianthus subcalvus** Craib in Kew Bull. 1933: 27. 1933 et Fl. Siam. Enum. 2(1): 218. 1934. TYPE: Thailand. Puket, Kerr 19421(K).

Distribution: Endemic to Thailand.

**5.49 Lasianthus tetragonus** H. Zhu, sp. nov. Fig. 3.

Proximus *L. foxworthyano* Craib, sed ramulis, stipulis, costa nervisque subtus minute puberulis, petiolis longioribus, nervulis utrinque dilutis, bracteis minoribus differt. A *L. fordii* Hance stipulis majoribus, bracteis minutis, fructibus conspicue tetragonis differt.

Frutex circa 1 m altus; ramuli adpresso breviter puberuli. Folia elliptica vel oblongo-elliptica, apice acuminata, summo apice aristata, basi cuneata vel acuta, 8.5~11 cm longa, 3~4 cm lata, sicca supra fusca glabra, subtus cinereo-viridia, ad costam nervosque adpresso puberula, costa supra impressa, subtus prominente, nervis lateralibus utrinque 6~7 supra impressa subtus prominentibus, nervulis subparallelis utrinque dilutis; petioli usque ad 1 cm longi adpresso puberuli; stipulae triangulo-lanceolatae, 2.5~3 mm longae adpresso puberulae. Inflorescentia axillaris sessilis, bracteis minutis. Fructus 4 mm longi minute puberuli, conspicue tetragonis.

**Thailand.** Pattani, Sai Khao National Park, alt. 250~400 m, 1993\_07\_16, Puff et Sridth 930716\_1/3 (holotype, AAU).

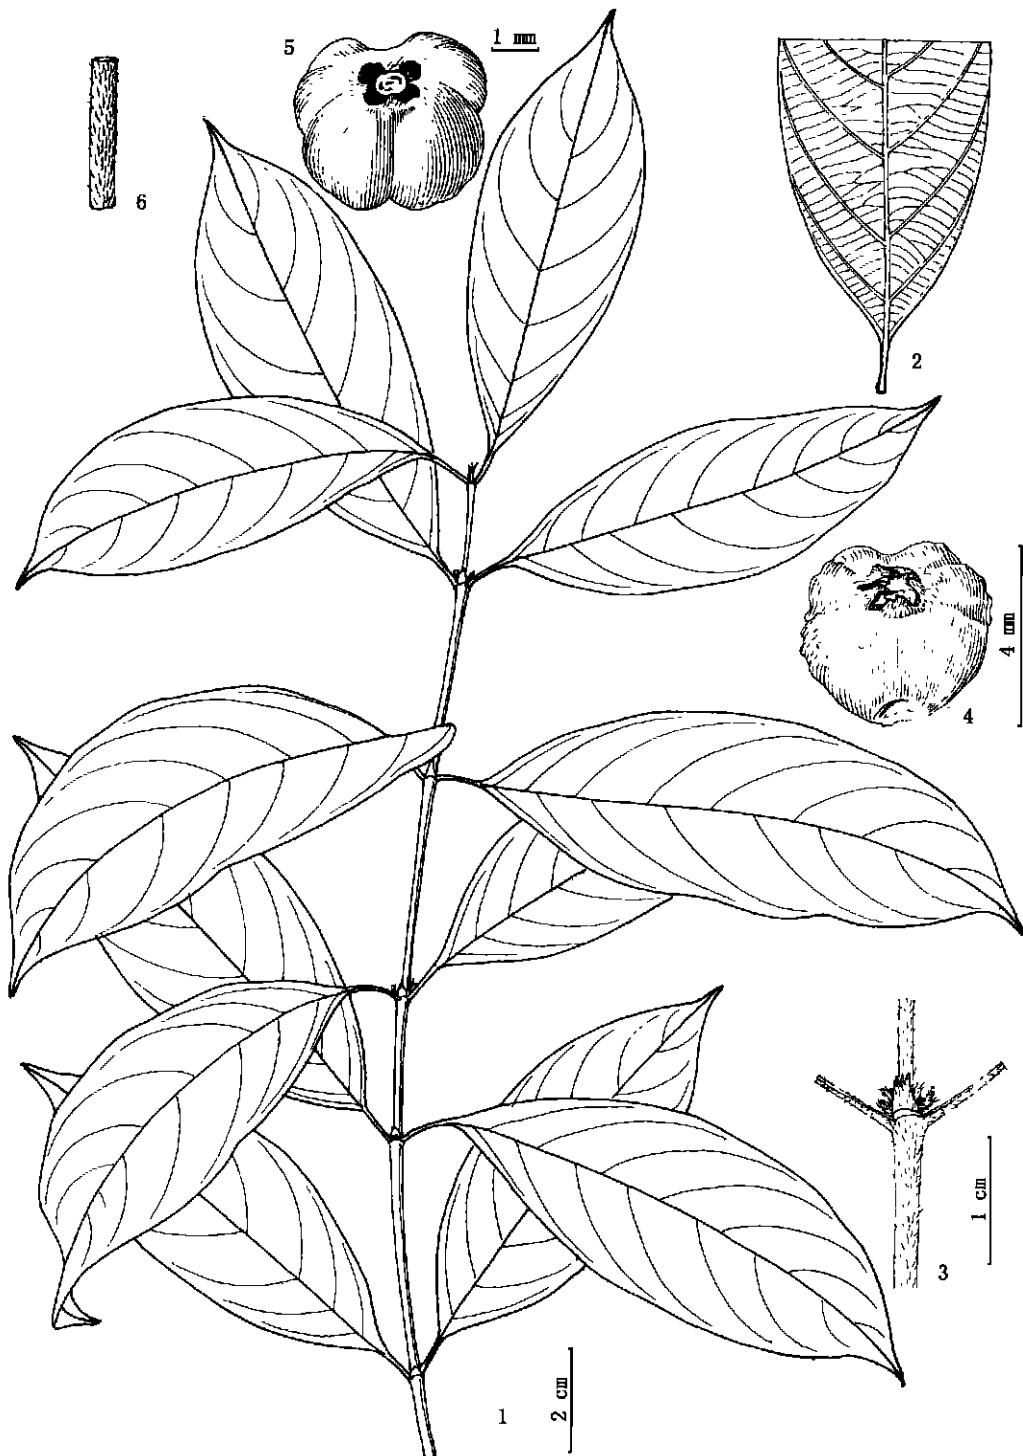

*L. tetragonus* differs from *L. foxworthyanus* by having puberulous branches and stipules, leaves with longer petioles and puberulous costa and nerves beneath, and smaller bracts. It differs from *L. fordii* by having minute bracts, bigger stipules and drupes with 4 pyrenes.

**5.50 Lasianthus tomentosus** Bl., Bijdr. 97. 1826; Ridley, Fl. Malay Penins. 2: 161. 1923; Craib, Fl. Siam. Enum. 2(2): 219. 1934; Backer et Bakh. f., Fl. Java 2: 343. 1965; H. Zhu in Acta Bot. Yunnan. 20(2): 155. 1998. TYPE: from Java (not designated).

*Lasianthus lei* Merr. et Metc. ex H. S. Lo in Bot. J. S. China 1993: 12. 1993. TYPE: China. Hainan, C. I. Lei 1025 (holotype SCBI; isotypes, K, P, SYS).

*Lasianthus cupreus* sensu Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 392, pro parte, quoad specimen Gaudichaud 229 which does not agree with the description of *L. cupreus* Pierre in having dense brown pubescence on branches and leaves beneath, but agrees with *L. tomentosus* Bl. instead.

Distribution: China, Thailand, Vietnam, Malay Peninsula, Singapore and Indonesia (Java, <http://>

Fig. 3 *Lasiandra tetragonon* H. Zhu

1. Branch; 2. Enlarged part of the lower surface of leaf; 3. Enlarged node showing stipule and axillary inflorescence;  
4 & 5. Fruit; 6. Enlarged branch (Drawn by X. L. Wu).

Sumatra).

**Thailand.** Prachuap, Shimizu *et al.* T\_7754(BKF, L), T\_14708 (BKF); Chunmpang, Kerr 11605(K); Larsen 9157 (BKF); Pangnga, Shimizu *et al.* T\_14714 (L).

**Vietnam.** Cochichina, Gaudichaud 229 (P).

**Malaysia** Malay Peninsula, Pahang, SFN 18478(SING).

**Singapore.** Ridley 1647(K).

**Indonesia.** Borneo, Fukirin 402 (L). Java, T. Horsfield 50(K); West Java, Tjibodas, Kds. no. 32018B(K); Eiland Bawean, Hoogerwerf 218a (L); Unknown coll., H. L. B. No. 908. 218~ 33 (L). Sumatra, Teysmann 19401 (L).

**5.51 Lasianthus trichophlebus** Hemsl. in Journ. Linn. Soc. (Bot.) 23: 388. 1888; H. Zhu in Acta Phytotax. Sin. 32 (1): 70. 1994. TYPE: Guangdong, Luo Fu Shan, Ford 113 (K).

*Lasianthus fordii* Hance var. *pubescens* (Matsum.) Yamazaki in J. Jap. Bot. 39: 352. 1964, pro parte quoad syn. *L. trichophlebus* Hemsl.

### 5.51a subsp. **trichophlebus**

Distribution: China.

### 5.51b subsp. **barbellatus** (Ridley) H. Zhu, stat. et comb. nov.

*Lasianthus barbellatus* Ridley in Journ. As. Soc. Straits, 77: 187 1917, Fl. Malay Penins. 2: 164. 1923; Craib, Fl. Siam. Enum. 2 (1): 208. 1934; Wong, Tree Fl. Malay Penins. 4: 368. 1989. TYPE: Malay Peninsula. Pahang, Pulau Tiuman, Juara Bay, Burkhill 976 (holotype, SING; isotype, K).

*Lasianthus cupreus* Pierre ex Pitard in Lecomte, Fl. Indo-Chine 3: 392. 1924, syn. nov. TYPE: Vietnam. Condor, Harmand s. n. (Pierre Herb. no. 6173) (lectotype, P, designated here).

Distribution: S Vietnam, Thailand, Malay Peninsula, Indonesia.

**Thailand.** Surat, Kerr 12675, 1211(BK, BM, K); Sai YoK, Larsen 9157 (BKF); Phat-talung, Puff et Sridith 930710\_1/8 (PSU, AAU); Satun, C269(BKF); Lanpoon, Maxwell 94\_1235 (AAU); Tarutao, Gongdon 209 (AAU).

**Vietnam.** Delta Mekong, Harmand s. n. (P).

**Malay Peninsula.** Pahang, Pulau Tiuman, B. L. S. Wee MS 10 (SINU).

**Indonesia.** W Sumatra, Simarasap, alt. 1000 m, DA\_239, DA\_252(L); C Sulawesi, J. Th. Johanson *et al.* 209, 118 (L).

This subspecies differs from the typical subspecies only in having somewhat smaller and elliptic leaves.

**5.52 Lasianthus verticillatus** (Lour.) Merr. in Trans. Amer. Philos. Soc. n. s. 24: 372. 1935; H. Zhu in Acta Phytotax. Sin. 32 (1): 68. 1994; H. Zhu in Acta Bot. Yunnan. 20 (2): 156. 1998.

*Dasus verticillatus* Lour., Fl. Cochinch. 142. 1790; Moore in J. Bot. Brit. Foreign. 63: 250. 1925. TYPE: Cochinchina, Dausus G. 48 (holotype, BM).

*Lasianthus andamanicus* Hook. f., Fl. Brit. Ind. 3: 189. 1880, excl. var. *ciliatus* Deb et Gang.; Craib, Fl. Siam. Enum. 2 (2): 207. 1934. TYPE: Andaman, Wall. Cat. 8309 (isotype, K).

*Lasianthus obliquinervis* Merr. in Philipp. J. Sci. 1 (suppl.): 136. 1907. SYNTYPE: Philippine, Whitford 247 (isosyntype, P).

*Mephitidia chinensis* sensu Nakai, Trees and Shrubs Jap. ed. 1: 382. 1922, non Champ.

*Lasianthus nigrocarpus* Masam. in Trans. Nat. Hist. Soc. Formos. 22: 222. 1932, nom. nud.

*Lasianthus trichophlebus* aut. non Hemsl.: Fl. Hainan 3: 336. 1974; Icon. Corm. Sin. 4: 247. fig. 5907. 1975.

*L. tamirensis* Pierre ex Pitard in Lecomte, Fl. Gen. Indo\_Chine 3: 390. 1924. TYPE: Cambodia. Samrong\_tong, Mt. Tamire, Pierre 587 (holotype, P; isotype, K).

*Lasianthus chinensis* sensu Maxim. in Bull. Imp. Acad. Sci. St Petersbourg. 29: 173. 1883, non Benth. (1861); Henry, List Pl. Formos.: 51. 1896; Matsum. in Bot. Mag. (Tokyo) 15: 16. 1901; Pitard in Lecomte, Fl. Gen. Indo\_Chine 3: 391. 1924; Li, Wood. Fl. Taiwan 855. 1963, pro parte; Chao in Fl. Taiwan 4: 286. 1978, pro parte quoad pl. 1005.

### 5.52a var. *verticillatus*

Distribution: China, Japan (Ryukyu), Philippines, Indonesia, Thailand, Vietnam, Laos, Cambodia, Myanmar, India (Andaman and Nicobar).

**Thailand.** Loei, Beusek 7550(K), Lekagul 82(BKF); Rayawng, Put 2704(K); Ban Dan, Kerr 4133(K); Peninsular region, Charoenphel 4095 (K, E); Chaiyaphun, Geesink 6877(K), Vacharee 1064 (BK); Nakhon Ratchasima, Beusek 1881(K, BKF); Chiang Mai, Geesink 5695 (K), Put 2740 (E), Murata *et al.* 15745 (BKF); KhonKaen, Murata *et al.* T\_41830, 41828 (BKF); Chulaphorn Dom, Larsen 31454(K), Kerr 4133(K); Beusekom *et al.* 4116 (P); Trat, Phengnaren s. n. (BM); Wilson 11111; Suzuki 4491; Tanaka 1757, 11124 (E); Keng et Kao 2683 (E); Taipei, Boufford *et al.* 24960 (KUN). Hongkong: Leveil 673 (E). Guangdong: Lofu Mt., F. C. Hou 74040 (SCBI), X. P. Kao 52444 (SCBI), X. Z. Wang 90 (SCBI).

**Japan.** Ryukyu, Furuse 2987, 856, 4667, 2910, 2845, 3640, 2875, 3379.

**Philippines.** Mindanao, Elmer 14007 (K, E); Luzon, Elmer 14908, 16522 (K, P); Bana\_jao, Robinson s. n. (Bureau Sci. no. 6571) (P); Tayabas, Ramos 13323; Bataan, Whitford 247 (P); Rizal, San Andales, Edano s. n. (Bureau Sci. no. 48702) (P); Pampanga, Mt. Pinatubo, Elmer 21967 (P); Negros, Edano s. n. (Herb no. 38847\_2) (L); Palawan, D. D. Soejarto *et al.* 7656 (L).

**Indonesia.** Java, Zollinger 594? (P); C Java, Kostermans 6255 (L). Sumatra, Enggano, Lutjeharms 4109 (P); Lampung, unknown coll. no. 42 (L). Celebes, N Sulawesi, A. C. Church

*et al.* 10 (L). Lesser Sunda, J. Elbert 4429 (L); Verheijen 2365 (L), 3173 (L).

**India.** Andaman, Kurz s. n., King s. n. (K), Par Reroa 459 (K).

**Myanmar.** Tenasserim, Kurz 21591 (K).

This species was often confused with *L. chinensis* Benth. It differs from the latter in having thinner or sparse appressed pubescence on branches and leaf nerves beneath, coriaceous leaves with 5~9 pairs of nerves and parallel veinlets, cupulate and usually truncate calyx without teeth or sometimes with minute teeth, as well as the fruit not angular.

**5. 52b** var. **taitoensis** (Simizu) H. Zhu in Acta Phytotax. Sin. 32 (1): 69. 1994 et in Acta Bot. Yunnan. 20 (2): 156. 1998. — *Lasianthus taitoensis* Simizu in Trans. Nat. Hist. Soc. Formos. 34: 239. 1944. — *Lasianthus obliquinervis* Merr. var. *taitoensis* (Simizu) T. S. Liu et J. M. Chao in Taiwania. 10: 145. f. 15. 1964. TYPE: China. Taiwan, T. Suzuki et Fukuyama s. n. (TIU), not seen.

*Lasianthus truncatus* Bedd., Icon. Pl. Ind. Or. 1: 2. t. 9. 1874; Hook. f., Fl. Brit. India. 3: 189. 1880; Deb et Gang. in J. Econ. Taxon. Bot. 15 (2): 302. f. 13. 1991. TYPE: India. Mahendra Hill, Beddome s. n. (lectotype, K).

Distribution: China (Taiwan), India, Malay Peninsula, Myanmar, Thailand (new record), Indonesia (Sumatra) and Philippines.

**Thailand** Collins 407 (K); Korat, Kerr 2145 (K); Chonburi, Phengnaren 212 (BKF); Trang, Wenpruk 743 (BKF); Narathiwat Larsen *et al.* 43012 (AAU).

**China.** Taiwan: Yeh 793 (K).

**Myanmar.** Tenasserim, Helfer 2933 (K).

**Malaysia.** Malay Peninsula, Langkauii, Robinson 6292 (K).

**Indonesia.** Sumatra, Teysmanna s. n. (K).

**Philippines.** Luzon, Bontoc, Ramos et Edano s. n. (Bureau Sci. no. 38061) (P); Negros Occidental, B. C. Stone *et al.* 6178 (L).

**India.** Bihar, Haines 651 (K); Vizagakalan, Luihiugt. 42, s. n. (K); Salem, Matthew 28243 (K).

This variety differs from the typical variety in having smaller, lanceolate, 7~21 cm long and 1.5~3.5 cm wide leaves.

**5. 52c** var. **hirsutus** H. Zhu, var. nov.

A typo ramulis tenuibus, appresse hirsutis, stipulis dense hirsutis, bracteis subulatis, calycibus hirsutis, lobis subulatis hirsutis differt.

TYPE: Thailand. Songkla, in evergreen forest, 21 Dec, 1978, G. Gongdon 104 (holotype, AAU); Patthalung, K. Larsen *et al.* 41510 (AAU); Chanthaburi, C. Niyomdharm *et al.* 1318 (BKF).

**5. 53** *Lasianthus wallichii* (Wight et Arn.) Wight in Calc. Nat. Hist. 6: 503. 1846; Hook. f. Fl. Brit. Ind. 3: 180. 1880, excl. var. ? *penangensis* Hook. f.; Matsum. in Bot. Mag. Nepal 2: 204. 1979; Deb et Gang. in J. Econ. Tax. Bot. 15 (2): 307. 1991; H. Zhu in Acta Phytotax. Sin. 32 (1): 56. 1994; H. Zhu in Acta Bot. Yunnan. 20 (2): 157. 1998. — *Mephitidia wallichii* Wight et Arn., Prodr. 1: 390. 1834, in nota. TYPE: India. Silhet, De Silva s. n. ex Wall. Cat. 8442 (K).

*Novatilea? hispida* Wall. in Roxb. Fl. Ind. 2: 187. 1824, non est *Lasianthus hispidus* Elmer, Leafl. Philip. Bot. i.: 10. 1906.

*Lasianthus densifolius* Miq. Fl. Ind. Bat. 2: 321. 1857; King et Gamble, Mat. Fl. Malay Penins. no. 15: 122. 1904, pro parte; Ridley, Fl. Malay Penins. 2: 153. 1923, pro parte; Craib, Fl. Siam. Enum. 2 (1): 210. 1934; Wong, Tree Fl. Malay Penins. 4: 368. 1989, pro parte, syn. nov. SYNTYPE: Java, Jungh. s. n. (L).

*Lasianthus plagiophyllus* Hance in Journ. Bot. n. s. 4: 196. 1875; T. S. Liu et J. M. Chao in Taiwania 10: 147. fig. 16. 1964; J. M. Chao in Fl. Taiwan 4: 303. pl. 1015. 1978. — *Lasianthus wallichii* (Wight & Arn.) Wight subsp. *plagiophyllus* (Hance) C. Y. Wu et H. Zhu in Acta Phytotax. Sin. 32 (1): 57. 1994. — *Mephitidia plagiophylla* (Hance) Nakai, Trees and Shrubs Jap. rev. ed. : 529. 1927. TYPE: China. Hongkong, Herb. Hance 18438 (holotype, BM; isotype, K).

*Lasianthus bordenii* Elmer, Leafl. Philip. Bot. 1: 11. 1906. TYPE: E. Elmer 6977 (isotypes, E, YN).

*Mephitidia tonkinensis* Drake in Morot, J. de Bot. 9: 240. 1895. — *Lasianthus tonkinensis* (Drake) Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 376. 1924. TYPE: Vietnam. Tonkin, Bavi, Balansa 2656 (holotype, P; isotype, K).

### 5.53a var. *wallichii*

Distribution: NE India, Nepal, Bhutan, China, S Japan, Philippines, Indo-China, Thailand, Myanmar, Indonesia and New Guinea.

**Thailand.** Nan, Larsen et al. 44473 (AAU); Phetchaburi, Larsen et al. 45095 (AAU); Rachasima, Kerr 9845 (BK), Phengklai 433, 497 (BKF, K); Nakhon Sritamarat, Kerr 15466 (BK), Bunnak 734(BKF), Beusekom et al. 798(BKF); Conburi, Maxwell 76\_145 (BK); Peninsular region, Larsen 3581 (E), S. Pheng 503; Korat, Kerr 9845 (K); Salut, Kerr 15739(K); Sritamarat, Kerr 15466(K); Trang, Larsen et al. 41543 (AAU); Khao Chong, Charoenphol et al. 3709 (P).

**China.** Taiwan: Oldham 299, 223(BM); Boufford et al. 24964 (KUN); W. R. Price 1117, 1446, C. E. Chang 2476, T. Y. Liu et Y. Shimada et al 11123 (E); Faurie 252, 241 (BM); Taipei, Boufford et al 24964 (KUN), Keng s. n. (L).

**Japan.** Ito, Murata s. n (K). Ryukyu, Furuse 1917, 4321, 3868, 4468, 4013, 1513, 13465, 1818, 1767, 1428, 1226, 10438 (K); Nakaike 633 (Okinawa) (K, BM), Murata 17031; Yamazaki 19115 (K).

**Vietnam.** Condor, Harmand s. n. (P); Bien\_hoa, Pierre 1341 (P); Ninh thai, Bon 4071 (P), 4219 (P); Quang\_tri, Eberhardt 2019 (P).

**Cambodia.** Thepong, Pierre 1341 (P).

**India.** Khasia, Keenan 495(K); Upper Assam, Cadhar, Keenan s. n. (K).

**Myanmar.** Tenasserim, Tavoy, Keenan et al. 1520 (E), 1199 (E).

**Philippines.** Luzon, Pampanga, E. Elmer 22097 (K); Bataan, J. E. Borden 2088 (E); Sibulan, Negros, Edano s. n. (Herb. No. 2099\_2) (L); Dagami, Ramos s. n. (L).

**Indonesia.** Java, Unknown locality and collector, H. L. B. No. 932.34\_178 (L); Unknown locality, Backer 6074(L), Korm. 2727 (L); West Flores, Unknown locality, Kostermans et Wirawan 490 (L); P. E. Schmutz 56 (L); Lesser Sunda, Verheijen 705(L), 704(L), 4768 (L), 4079(L), 3158 (L); Molukken, E. Stresemann 91 (L).

**New Guinea.** Morobe, B. J. Conn. 1719(L), M. S. Clemens 1192 (L).

The syntype of *L. densifolius* Miq. in L (Jungh. s. n.) agrees exactly with the type of *L. wallichii* Wight. Hooker's description and the cited specimen Wall. Cat. 8441 in part (K) does not agree with Michel's type and it represents a different species. King and Gamble (1904), Ridley (1923) and Wong (1989) followed Hooker's conception and treated those two species as one.

**5.53b** var. **setosus** (Craib) C. Y. Wu et H. Zhu in Acta Phytotaxon. Sin. 32 (1): 57. 1994; H. Zhu in Acta Bot. Yunnan. 20 (2): 158. 1998. TYPE: Thailand. Rancury, Kerr 11827 (holotype, K; isotype, BM).

*Lasianthus setosus* Craib in Kew Bull. 1933: 26. 1933 et Fl. Siam. Enum. 2 (1): 217. 1934.

*Lasianthus thorelii* Pitard in Lecomte, Fl. Gen. Indo-Chine 3: 389. 1924. TYPE: Laos. Penongs, Thorel 2161 (holotype, P).

Distribution: China (S Yunnan), Laos, Thailand.

**Thailand.** Tung Salaeng Luang, Larsen 808(K), Hansen *et al.* 11088 (K), Tagawa *et al.* 2112(BKF), 11790 (BKF); Chiang Mai, Schumacher 722 (BKF).

This variety differs from var. *wallichii* in having stiff hairs on branches and sometimes on leaves too.

**5.53c** var. **hispidocostatus** H. Zhu in Acta Bot. Yunnan. 20 (2): 158. 1998. TYPE: China. Yunnan, Szemao, in forest, 4000 ft., Henry 12789 (holotype, K).

*Lasianthus wallichii* sensu Kurz, For. Brit. Burma 2: 31. 1877, non Wight.

Distribution: China, Nepal, Bhutan, NE India, Bangladesh, Myanmar, Thailand (new record).

This variety differs from the typical variety in having leaves which are almost not oblique at base and hairy on midrib above.

**Thailand.** Chiang Mai, Fukuoka T\_62491 (BKF).

**China.** Yunnan: Henry 12789a (E, K); Xizang: Mêdog, H. Sun *et al.* ETM\_1494, 2148, 2214 (KUN).

**India.** Naga hills, Meebold 7462; Khasia, J. D. Hooker & T. Thomson s. n. (K).

**Bangladesh.** Chittagong, J. S. Gamble 7910 (K).

**Myanmar.** Sumpra Bum, Kingdon\_Ward 20391(K); Nam Tamai, Kingdon\_Ward 9150(K); Kalay Hills, Prazer 89 (E).

**Nepal.** Chainpur (5000 ft.), Stainton 442 (E).

### Species excluded from *Lasianthus* Jack.

**Saprosma brevipes** (Craib) H. Zhu, comb. nov. —— *Lasianthus brevipes* Craib in Kew Bull. 1933: 20. 1933 et Fl. Siam. Enum. 2 (1): 208. 1934. TYPE: Thailand. Nakawn Srita-marat, Kerr 15641 (holotype, K, isotypes, BM, BK).

Distribution: Endemic to Thailand.

**Thailand.** Chanthaburi, Beusekom *et al.* 2200 (BKF); Ranuary, Kerr. 16652 (BM); Pat-tani, Kerr 7776 (BM).

This species has typical 2-pyrened drupe and should be a *Saprosma* species.

**Saprosma lowianus** (King et Gamble) H. Zhu, comb. nov. —— *Lasianthus lowianus* King et Gamble in Journ. As. Soc. Beng. 74. Addend. Corrig.: 871. 1909; Ridley, Fl. Malay

Penins. 2: 167. 1923; Craib, Fl. Siam. Enum. 2 (1): 213. 1934; Wong, Tree Fl. Malay Penins. 4: 368. 1989. TYPE: from Malay Peninsula, not seen.

*Lasianthus lucidus* King & Gamble, Mat. Fl. Malay Penins. no. 15: 132. 1904, non Blume (1826). SYNTYPES: Malay Peninsula. Selangor, Ridley 7437(SING), Wray 2807(SING).

*Lasianthus glaberrimus* Ridley in Journ. As. Soc. Straits, 79: 86. 1918, non Ridl., 1920; Craib, Fl. Siam. Enum. 2 (1): 211. 1934. SYNTYPES: Malay Peninsula. Selangor, Ridley 8574; Malacca, Maingay s. n.; Penang, Curtis 964; Kedah, Ridley 5549, not seen.

*Lasianthus virgatus* Craib in Kew Bull. 1933: 28. 1933 et Fl. Siam. Enum. 2 (2): 219. 1934, syn. nov. TYPE: Thailand. Trang: Kerr 15226 (K).

Distribution: S Thailand, Malay Peninsula.

**Thailand** Surat, Kerr 13245 (BK), 13245a (BK); Puket, Kerr 14499 (BK), 19194 (BK), Kerr 19426 (BK), Kerr 16921 (BK), Kerr 17190 (BK), Kerr 18420 (BK), Kerr 15260 (BK), Lakshvakaara 310 (BK); Nakhon Sritamarat, Kerr 15469 (BK), Beusekom *et al.* 890 (BKF), Larsen *et al.* 30838 (BKF), Iwatsuki *et al.* T\_14547 (BKF), T\_14628 (BKF), T\_14605 (BKF), Tagawa 4714 (BKF); Songkla, Kerr 15942 (BK); Pattani, Kerr 7563 (BK); Trang, Kerr 15257 (BK), Kerr 15258 (BK).

Most of checked specimens of this species show drupes with 2 pyrenes, which suggests it a member of *Saprosma* Bl.

*Lasianthus virgatus* Craib can not be separated from *Lasianthus lawianus* King & Gamble.

**Acknowledgments:** This project was sponsored by “The Chinese Academy of Sciences Foundation for Top One Hundred Scientists”. I thank the Herbaria L, K, BM, E, P, KEP, BKF, BK, SING and PSU, HN for conveniences of referencing specimens and AAU for loan of specimens as well as C for sending photos of type specimen. I also would like to thank Prof. Kai Larsen for sending me publications of the genus *Lasianthus* and Prof. Thawatchai Saritsuk, Dr. Kongkanda Chayamarit, Dr. E. R. Colin, Prof. C. Puff, Dr. D.M. Bridson, Prof. C.Y. Wu, Prof. Z.F. Xu, Prof. H. Li as well as my other colleagues who helped me a lot in this project. It is appreciated that Mr. X. L. Wu drew for the new species. Finally, Dr. D. Z. Li, Dr. H. Peng and two anonymous offered constructive comments and valuable suggestions on the manuscript.

**摘要** 在详细检查了 K, BM, E, P, AAU, L, KEP, BKF, BK, SING, PSU 等标本馆藏茜草科粗叶木属 *Lasianthus* Jack. 植物标本基础上, 研究了泰国产粗叶木属植物的分类学, 共归并 7 个种名, 建立 3 个新种, 3 个新变种, 1 个新等级, 以及 8 个泰国分布新记录种及 8 个泰国分布新记录变种, 确认泰国共有粗叶木属植物 52 种, 1 亚种, 12 变种; 讨论了易于混淆的种的界线、它们可能的亲缘关系以及识别要点。

**关键词** 茜草科; 粗叶木属; 分类学; 泰国
